What I Learned From This Assignment

- I learned how to create a profile card screen using Flutter.
- I understood how `Column`, `Row`, `Container`, `CircleAvatar` and `Text` are used to design a proper UI.
- I learned how to use colours, gradients, borders, shadows and spacing to make the screen look better.
- I understood how to divide the Flutter code into two files, `main.dart` and `profile_card.dart`.
- I learned how to make buttons clickable using `InkWell` and `onTap`.
- I also learned how to open external websites using `url_launcher`.
- I understood how to add an online image using `NetworkImage`.
- I learned how `SingleChildScrollView` helps when the content is bigger than the screen.

What I Understood

- I understood that Flutter UI is made by combining different widgets.
- I understood that small reusable functions can make the code easier to manage.
- I understood how different sections like About Me, Skills, Projects and Contact can be added to one profile screen.
- I also understood how a simple profile card can be made into a complete portfolio-style page.

Problems I Faced While Doing The Assignment

- Initially, the profile image was not visible because the image URL was incorrect.
- I was confused with using `Uri.https()` for the image URL.
- The website links needed `url_launcher` package to work properly.
- I also had to understand how to use `mailto:` for opening the email application.
- Managing the spacing and making the whole screen look bigger and balanced took some trial and error.
