What I Learned From This Assignment

- I learned how to create a responsive dashboard using Flutter.
- I understood how ListView, GridView, MediaQuery, Flexible and Expanded are used for responsive design.
- I learned how to divide the application into different files and screens.
- I understood how navigation works between different pages.
- I learned how to use images and assets in a Flutter project.
- I also learned how to add animations and make the dashboard look more professional.
- I understood how different widgets work together to create a complete dashboard.

What I Understood

- I understood that responsive design is important so the app can work properly on different screen sizes.
- I understood how to use reusable widgets instead of writing the same code again.
- I understood how separate pages can make the project more organised and easier to manage.
- I understood how colours, cards, spacing and animations can improve the overall UI.

Problems I Faced While Doing The Assignment

- I faced problems while loading images because of incorrect image file extensions and asset paths.
- I faced some Flutter rendering and layout errors while running the application.
- I had some issues with navigation because the separate pages were not connected properly at first.
- I also faced some warnings related to deprecated Flutter methods.
- Fixing these problems helped me understand Flutter project structure and debugging better.
